

main.cpp

Share

Run

```
1  #include <iostream>
2  #include <fstream>
3  using namespace std;
4
5  int main ()
6  {
7      string line;
8
9      fstream sourceFile;
10     fstream destinationFile;
11
12     sourceFile.open("../source.txt");
13     destinationFile.open("../destination.txt");
14
15     if (!sourceFile || !destinationFile)
16     {
17
18     }
19
20
21     sourceFile.clear();
22     sourceFile.seekg(0);
23
24     destinationFile.clear();
25     destinationFile.seekg(0);
26
27     cout << "Source File:" << endl;
28     while (getline(sourceFile, line))
29     {
30         cout << line << endl;
31         destinationFile << line << endl;
32     }
33
34     sourceFile.clear();
35     sourceFile.seekg(0);
36
37     destinationFile.clear();
38     destinationFile.seekg(0);
39
40     cout << "\nDestination File:" << endl;
41     while (getline(sourceFile, line))
```
